

68U606 Manual Syringe Pump

The Manual Stereotaxic Injector provides simple, precise manual control to inject/withdraw the desired amount of fluid directly through the needle in the brain. It can be mounted directly to a stereotaxic manipulator and the easy control knob allows the fine movement of the micro-syringe. The total range of movement is 25mm with accuracy of $10\mu m$. The syringe volume ranges from $1\mu l$ to $100\mu l$.

(syringe not included)
