

68U397 Level Calibrator - Rat

The 68U397 calibrator refers to the international brain atlas of rats and takes craniofacial bregma and lamba as the reference points. The distance between B(0) and L(0) is about 7,67mm. When the animal craniofacial is in the horizontal state, these two points should be on the same level. When fixed to the X-Z manipulator of stereotaxic instrumnet and descends, the tip of B(0) and L(0) should touch to craniofacial at the same time. Otherwise the adaptor should be adjusted to meet the requirements.
